v. 129 [no. 5] p. 1068-1069.

Butadiene polymerization under the effect from a sys-
tem, composed of cobalt oxide and aluminum diethyl-
halides, occurs with a significant rate at 0°. Applica-
tion of cobalt oxide, carried on aluminosilicate, leads
to some drop in polymerization rate. The polymers
have an unsaturation, equal to 97.5-99% of the
theoretic, which indicates an absence of secondary re-
actions, tied with a participation of double bonds in
polymer.

DESCRIPTIONS: *Drilling machines, *Turbines,
Effectiveness, Well drilling.

The experiments at Saint Bauzille have shown that we
already dispose in France of a sufficiently developed
tool system that would permit passing to an industrial
expansion of turbo-drilling. In a large portion of the
French wells, turbo-drilling should pay off immediately.
